F5 Networks adds VADition for storage push

Niche distributor joins Computerlinks, Avnet and Westcon Security in UK line up

F5 Networks has moved from three to four UK distributors after appointing VADition to push its fast-growing ARX storage line-up.

The vendor launched a [pan-European distribution review](#) earlier this year and at that time revealed it was considering appointing storage specialists to help push ARX out to market.

VADition will focus on ARX, which is based on [F5's 2007 acquisition of Acopia](#), although it will have access to the full portfolio.

at VADition, said the distributor would initially focus on recruiting the 15 or so specialist storage VARs it already works with around Isilon.

"This is fantastic news for us. VADition is associated with disruptive technologies but it can also add value to established vendors looking to punch above their weight in specific markets," he said.

However, F5's existing trio of distributors gave the move a lukewarm reception, with each talking up their skills around ARX.

Laura Harman, sales director at Avnet Technology Solutions, said: "With the integration of Bell, Avnet becomes the premier distributor for storage solutions in the UK, with an unrivalled portfolio of leading storage vendors. Avnet already provides the perfect channel environment within which F5 can grow their ARX business."

Dave Ellis, director of new technology and services at Computerlinks, said: "F5 is growing really well for us. We would have preferred it if they hadn't appointed a further distributor but we are still focused on taking them into new markets," he said.

Niall McGrane, general manager at Westcon Security said: "We are focusing on ARX and have developed a pipeline for it so we are confused as to why it needed another partner in that space."

Another source, who wished to remain anonymous, said the partnership had echoes of VADition's short-lived relationship with rival Juniper, which [signed it up for its storage products in 2007](#). "They tried this with Juniper and it didn't work out so it will be interesting to see if this is any different."
