

PRESS RELEASE

VADition Celebrates Isilon Win at Techworld 2007 Awards

Farnham, Surrey, 10th July 2007 – VADition, the Value Adding Distributor is today acknowledging the success of its vendor partner Isilon, after Techworld - a leading technology publication named the Isilon IQ the “Network Attached Storage Product of the Year” at its 2007 awards. Isilon, a finalist in last year’s storage category, beat competition from Adaptec and NetApp to be named winner, based on its innovative OneFS operating system software and rapid growth in the UK marketplace.

Neil Ledger, co-founding director of VADition, Isilon’s fastest growing UK distributor said, “This is a fantastic achievement and serves as a testament to the product innovation that we value so highly at VADition. This reinforces Isilon’s growing position in the storage market and reassures our reseller partners that they are partnering with a market-fronting Distributor, led by intuitive technologies.”

The TechWorld award was specifically given to Isilon OneFS®, the industry’s first single file system that unifies and provides instant and ubiquitous access to the rapidly growing stores of digital content and unstructured data, eliminating the cost and complexity barriers of traditional storage architectures.

About Isilon Systems

Isilon systems is the worldwide leader in clustered storage systems and software for digital content, enabling enterprises to transform data into information – and information into breakthroughs. Isilon’s award-winning family of IQ clustered storage systems combines Isilon’s OneFS operating system software with the latest advances in industry-standard hardware to deliver modular, pay-as-you-grow, enterprise-class storage systems. Isilon’s clustered storage solutions speed access to critical business information while dramatically reducing the cost and complexity of storing it. Information about Isilon can be found at <http://www.isilon.com>

About VADition

VADition (www.vadition.com) is a Value Adding Distributor introducing a new wave of technologies to their partners in the UK. These technologies, they describe as ‘Intuitive Technologies’, a range of Internet Inspired platforms and services designed around simplifying increasingly complex and overloaded Information Infrastructures. The products chosen mirror the self-service behaviour of an increasingly IP savvy society – business and consumer. The characteristics of VADition’s chosen vendor partners therefore must demonstrate a belief in new business models embraced within ‘Web 2.0’, and have designed their technology around ‘Self Service’ or simplification.
